REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 14-26 filed on 8/29/2006 have been considered in view of the specification and the drawings of this application with respect to the references of the record. Claims 14-26 drafted in terms of means plus function, which the claims have been interpreted in view of the specification and the drawings of this application. The claims recite means for detecting the actual armature position, means for measuring the actual excitation coil current, means for adjusting the excitation coil current during each half-wave of the armature motion in the steady state of the armature, and the armature being supplied with the amount of energy such that the oscillation amplitudes of the predefined armature stroke are reached. Dimanstein (2003/0218854 and 7,184,254) discloses a linear compressor control system. Dimanstein discloses the control circuit 100 monitors when a new compressor cycle or half-cycle is about to begin. However, Dimanstein does not teach or suggest to use a means for detecting the actual armature position with a linear position detector, and means for adjusting the excitation coil current during each half-wave of the armature motion in the steady state of the armature, and the armature being supplied with the amount of energy such that the oscillation amplitudes of the predefined armature stroke are reached as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
